

VrindaaCorp Services — Master Access Vault & Credentials Register

Confidential & Proprietary • Final Client Handover Document

System: VrindaaCorp Enterprise CRM & Autonomous Outreach Infrastructure

Handover Date: September 2026 • Document Version: 1.0 (Production Release)

1. System Overview & Asset Metadata

Parameter	Specification Details
Client Legal Name	VrindaaCorp / VrindaaCorp Services
Public Web Portal	https://www.vrindaacorp.com
Enterprise CRM Portal	https://vrindaacorp-crm.tech
Primary Production VPS	Hostinger KVM 8 (<code>srv1967428.hstgr.cloud</code>)
Static IPv4 Address	<code>200.234.47.7</code>
Data Center Location	India – Mumbai 2
Operating System	Ubuntu 24.04 / 26.04 LTS (64-bit Linux)
Hardware Specification	8 vCPU Cores, 32 GB RAM, 400 GB NVMe Storage, 32 TB Monthly Bandwidth
Hosting Contract Expiration	2027-09-09 (Fully prepaid 3-year term)
Warranty & Support	30-Day Engineering Bug-Fix Warranty included from handover date

2. Infrastructure & Server Access Register

2.1 SSH / Terminal Access (Root Level)

[WARNING]: Root access grants unrestricted control over the production filesystem, database, and process manager. Never distribute these credentials over unsecured channels.

Attribute	Value / Configuration
SSH Host / IP	200.234.47.7 (srv1967428.hstgr.cloud)
SSH Port	22 (Standard OpenSSH)
Default User	root
Authentication Type	Password / Public-Key Supported
Root Password	Agarwal@#2026
SSH Connect Command	ssh root@200.234.47.7
Web Server Root	/var/www/crm (Production CRM Next.js application)
Landing Page Root	/var/www/landing (Public Marketing Portal)
Evolution API Root	/var/www/evolution-api (WhatsApp Gateway Docker stack)

2.2 Process Manager (PM2) Services on Server

All core application services are managed via **PM2** under `root` , configured with automatic process resurrection on system reboots:

PM2 ID	App Name	Mode	Port / Binding	Internal Path	Purpose
0	vrindaa-web	cluster	127.0.0.1:3000	/var/www/crm	Next.js 14 Web Application & API
2	vrindaa-web	cluster	127.0.0.1:3000	/var/www/crm	Next.js Worker Thread (Cluster Instance)
1	vrindaa-worker	fork	Background	/var/www/crm	Email Dispatcher, IMAP Poller, Briefings
3	vrindaa-landing	fork	127.0.0.1:3001	/var/www/landing	Public Corporate Web Portal

3. Domains, DNS & SSL Certificates

3.1 Domain Ownership & Registrars

Domain	Registrar	Primary Nameservers	SSL Certificate
vrindaacorp.com	BigRock	Custom / Cloudflare / BigRock DNS	Let's Encrypt / Auto-renew via Certbot
vrindaacorp-crm.tech	Hostinger	ns1.dns-parking.com ns2.dns-parking.com	Let's Encrypt SSL (Wildcard / HTTPS Port 443)

3.2 Production Nginx Reverse Proxy & SSL Mapping

Nginx terminates TLS on port `443` and handles HTTP-to-HTTPS redirection on port `80`.

- **Configuration File:** `/etc/nginx/sites-available/vrindaacorp-crm.tech`
- **SSL Certificates:**
 - Fullchain: `/etc/letsencrypt/live/vrindaacorp-crm.tech/fullchain.pem`
 - Private Key: `/etc/letsencrypt/live/vrindaacorp-crm.tech/privkey.pem`
- **Auto-Renewal:** Managed via Systemd Certbot timer (`certbot renew --dry-run`).

4. CRM Application Authentication & User Vault

The CRM uses **NextAuth.js** with bcrypt-hashed credentials (salt cost factor: 12) to thwart timing attacks and email enumeration.

4.1 Production Super Admin Accounts

Account Type	Email Address	Initial Default Password	Configured Role	Access Level
Super Admin (CRM)	<code>admin@vrindaacorp.com</code>	<code>admin123</code>	<code>ADMIN</code>	Unrestricted global CRM admin rights
Secondary Admin	<code>admin@vrindaacorp.services.in</code>	<code>admin123</code>	<code>ADMIN</code>	Full administrative backup account
Executive Owner	<code>owner@vrindaacorp.services.in</code>	<code>admin123</code>	<code>OWNER</code>	Strategic memory control & WhatsApp co-pilot

[IMPORTANT]: Change the default seed password (`admin123`) immediately upon first login via **Account Settings** or **Settings** → **Users**.

4.2 Role-Based Access Control (RBAC) Matrix

Capability / Module	ADMIN	OWNER	AGENT (Field Staff)
Dashboard & Lead Management	Full	Full	Assigned Leads Only
Visual Sales Pipeline (Kanban)	Full	Full	Read/Update Assigned
Import & In-House Data Cleansing	✓ Allowed	✓ Allowed	✗ Blocked (Redirected)
Campaign Sequence Builder & Outreach	✓ Allowed	✓ Allowed	✗ Blocked (Redirected)
Email Template Editor & AI Refinement	✓ Allowed	✓ Allowed	✗ Blocked (Redirected)
Team Management & Mailbox Settings	✓ Allowed	✓ Allowed	✗ Blocked (Redirected)
WhatsApp AI Co-Pilot & Directives	✓ Global	✓ Executive	✗ No Directive Editing

5. PostgreSQL Database Credentials

The database runs natively on PostgreSQL 16 on the VPS host with external ports firewalled to local connections only.

Parameter	Value
Database Engine	PostgreSQL 16.x
Database Host	localhost / 127.0.0.1 (Port 5432)
Database Name	vrindaacorp_crm
Database User	vrindaa
Database Password	vrindaa (Production local socket access)
Connection String	postgresql://vrindaa:vrindaa@localhost:5432/vrindaacorp_crm?schema=public
Prisma Schema File	/var/www/crm/prisma/schema.prisma
Active DB Records	1,196+ Enterprise leads, 24 Relational Models

6. WhatsApp Autonomous Gateway (Evolution API)

The self-hosted WhatsApp Gateway allows bidirectional communication with zero per-template or per-conversation Meta Cloud API fees.

Configuration Key	Production Setting	Description
Service Engine	Evolution API v2.1.2	Dockerized Baileys WhatsApp Web Engine
Internal Endpoint	http://127.0.0.1:8080	Internal VPS Docker socket binding
Global API Key	vrindaacorp-evolution-key	Secured header authentication key
Instance Identifier	vrindaacorp-crm	Dedicated CRM WhatsApp instance
Webhook Delivery URL	http://127.0.0.1:3000/api/webhooks/whatsapp-evolution	Local fast-path Next.js webhook listener
QR Code Pairing	Available via CRM UI	/settings/whatsapp (Clean QR-only scanner)

7. Local Ollama AI Engine (VPS On-Premise)

An on-premise Large Language Model runs directly on the VPS CPU/RAM, providing 100% private, zero-token-cost intelligence for email copywriting and WhatsApp conversation parsing.

Property	Value
Ollama Service Port	11434 (http://127.0.0.1:11434)
Primary Production Model	llama3.2:3b (Optimized for warm, ultra-low latency execution: ~55 tokens/sec)
Alternative Installed Model	llama3.1:8b (High-reasoning general model)
Model Warming Status	Pre-warmed via systemd daemon on boot
Enforced Meeting Link	https://calendly.com/vrindaacorp-sales/30min

8. Inbound Mailbox & Email Delivery (SMTP / IMAP)

Channel	Protocol	Host / Port	Credentials / Username	Security Notes
Outbound Email	SMTP	smtp.gmail.com Port 587	sales@vrindaacorp.com Google App Password	TLS / STARTTLS enabled; sender stamped as "VrindaCorp Services"
Inbound Reply Polling	IMAP	imap.gmail.com Port 993	sales@vrindaacorp.com Google App Password	SSL/TLS; polled every 30s by vrindaa-worker
AWS SES (Optional Fallback)	SES API	ap-south-1 (Mumbai)	AWS Access Key & Secret	Pre-configured in .env.example for massive volume

9. Security Webhooks & Inbound Form Secrets

These secrets authenticate external webhook events coming into the CRM:

Webhook Route	Authentication Header / Parameter	Secret Value / Key Name
/api/inbound/form	X-Form-Secret or ?token=	INBOUND_FORM_SECRET
/api/webhooks/ses	?token= query parameter	SES_WEBHOOK_SECRET
/api/cron	Authorization: Bearer <secret> or ?token=	CRON_SECRET
/api/inbound/meta	hub.verify_token & X-Hub-Signature-256	META_VERIFY_TOKEN / META_APP_SECRET
/api/inbound/google	Webhook Authorization Key	GOOGLE_LEAD_KEY

10. Backup Schedule & Disaster Recovery

10.1 Hostinger Automated VPS Snapshots

- **Frequency:** Weekly automated full-image hypervisor snapshot.

- **Retention:** 2 active snapshot points stored off-host in Hostinger cloud infrastructure.
- **Restoration Time:** < 15 minutes to bare-metal state via Hostinger hPanel.

10.2 Daily Database Cron Dump

- **Cron Schedule:** `0 2 * * *` (02:00 AM IST nightly)
- **Backup Command:**

```
pg_dump -U vrindaa -d vrindaacorp_crm -F c -b -v -f /var/backups/crm/vrindaacorp_crm_$(date +%Y\%m\%d).dump
```

- **Local Directory:** `/var/backups/crm/` (Retained for 30 rolling days).

11. Engineering Warranty & Support Service Level Agreement (SLA)

The deployment is covered by a **30-Day Technical Bug-Fix Warranty** beginning upon formal client handover:

SLA Severity Matrix

Severity Level	Definition	First Response Time	Target Resolution Time
Sev-1 (Critical)	Core CRM down, database corrupted, email sequence completely halted, or security breach.	< 2 Hours	6 – 8 Hours
Sev-2 (Major)	WhatsApp notifications failing, IMAP reply ingestion delayed, or CSV import errors.	< 4 Hours	< 24 Hours
Sev-3 (Moderate)	Visual glitch, report export formatting anomaly, or single-user authentication issue.	< 8 Hours	< 72 Hours
Sev-4 (Minor)	Minor text adjustments, template prompt suggestions, or cosmetic improvements.	< 24 Hours	Next Patch Cycle

End of Master Access Vault. Keep this document stored in an encrypted offline password manager or secure corporate archive.
